About smart life

Smartplace solutions bring your home its set of brain, sensors and actors! The system links them all via the smartphone apps, as one multiband integrated place called the smart home.

At smart place, we find the sweet spot between the available smart solutions and your requirements with our top-notch devices, acquired from the world's best smart systems companies.

The system is scalable and can be grown as per the needs and the budget. So you can also add more sensors and actors to your home to keep making it smarter in steps.

The solutions are very easy to use and are easy even to be installed as DIY.

Make your home smart so you can get the most from it with the least possible effort.

Smart living start with SmartPlace.pk.

- See and speak to anyone at your front door from your phone, ensuring you never miss a delivery or a visitor
- Ensure peace of mind with instant smoke, fire or flood notifications
- Geo-fencing with locations of smart home residents
- Car and gate integration

Its an investment

Opting to smartify your home is an investment; take a look at the three key factors bringing biggest value and returns on your investment.

Secure your assets - Make your home Theft Proof

A smart home system ensures the safety and security of your home. At times you forget to lock your doors, your smart lock will detect it to lock automatically and ensuring security of your home from theft. Smart devices like surveillance cameras, motion sensors, and detectors keep you informed of all the activities happening around your home.

Nothing is more important than the safety of your loved ones - Augment the Safety of your home and residents

Fire safety is another major reason why you should consider the idea of the home automation system. With the help of infrared sensors, flammable gas detectors, and smoke detectors, you can keep your home safe from the danger of fire. These components are like the eyes and ears that keep your home safe from any sign of danger and alert if any unfavourable situation is suspected.

Save on your utility bills - Save money through Energy Efficiency

To curtail the expenses on utility bills, smart home options should be considered to save money. The intelligent devices installed in your home will switch off any un-attended appliances like TV, fans, lights, air-conditioner, and heater in your absence. The smart home system will learn your daily energy consumption pattern and act accordingly to minimize the bills. It will also notify in case any appliance is consuming excessive energy

Top of the line products

Smartplace.pk has picked products from global leaders in the smart home realm. Our packages feature products from Fibaro, Vera, Aeotech, Samsung SmartThings, Google, Apple, Amazon, and others.

Controller and Hub

The brain of the smart system, controller/hub integrates the sensors and actors to make management of your smart home system possible via your tablet, PC, and smartphone.

Multisensors 6 in 1

Motion, light, temperature, and gas sensors are battery powered and completely wireless, and compatible with other devices.

Relay

Relays are installed in the standard wall switch box or wherever necessary to control electric devices like fans and lights.

Transition to smart life

Technology has advanced at a swift pace that shows no signs of slowing down. Things that were previously only seen in science fiction are now a reality.

You don't have to be a billionaire to possess a smart house today, and building one won't take years.

Whether you want to run your house through a central system or are content with app-based gadgets, the possibilities are endless.

Home automation began as thermostat was invented and has since grown to become one of the largest and fastest-growing technological markets.

It may be used for home security, regulating appliances, monitoring energy usage, as a personal assistant, caring for the elderly or disabled, and much more.

Transition from brick and mortar structure to a smart home is remarkable; thanks to IoT and IFTTT technologies that transformed the whole landscape of home automation by reducing human interaction with the appliances.

Unlike past, today the home itself is an intelligent entity that can operate and regulate itself. Using sensors to detect motion, facial recognition, voice commands, light, humidity and more, you can customize the operations of your home to amplify luxury and comfort.

Smart home - A place that is *cosy, functional and in your control*

Extended smart solutions - Delivering enormous value

Surveillance and security
Street lights management
Water distribution and metering
Cities monitoring and management
Buildings and malls management
